INTRODUCTION

Within these pages, you will find a condensed listing featuring most of the basic unclassified types developed and manufactured by the Litton Industries Electron Tube Division. Other electron tubes with frequency and power variations are also available.

The 1962 edition of the Litton Condensed Tube Catalog provides an introduction to many new tube types. You will find devices *now being produced* in the super power magnetron field; klystrons of the broadband and super power class; new miniature magnetrons; a new group of switch tubes; new families of compact, lightweight traveling wave tubes; advances in the millimeter wave field; new precision, high resolution cathode ray tubes; the Litton Precision Resistance Network Analogue; and new accessories and equipment.

Litton Industries has continued its expansion during the past year, yet has not sacrificed its reputation for the highest quality in the microwave and display fields. High performance and reliability have always been foremost in the design and production of Litton tubes.

PULSE MAGNETRONS

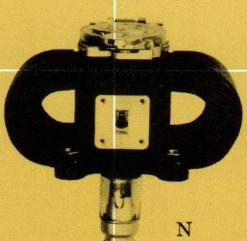

Tube Type	Minimum Peak Power kw	Frequency Mcs	Nominal Operating Characteristics				Max. Duty %	Max. Wt. oz.	Designed for high performance aircraft, missile and satellite applications, this series of highly ruggedized magnetrons provides a wide range of power levels. Low thermal factors (less than 75 Kc/°C), high frequency stability, and short pulse operation (.020 μs and less) make these tubes very versatile. Other frequency versions throughout high X-band are available upon request.
			Ef Volts	If Amps	eb volts	ib amps			
L-3602	0.03	8600 ± 40	6.3	0.50	550	0.30	2.7	22	
L-3105	0.10	9300 ± 40	6.3	0.50	800	0.55	2.7	22	
L-3434	0.10	9950 ± 30	6.3	0.50	800	0.55	2.7	22	
L-3603	0.50	9300 ± 30	6.3	0.50	1300	1.30	2.0	22	
L-3429	1.0	9300 ± 30	6.3	0.50	1400	2.20	0.5	22	
L-3604	1.0	9300 ± 30	6.3	0.50	2800	1.33	0.3	22	
L-3238	1.0	9340 ± 30	6.3	0.50	2800	1.33	0.3	22	
L-3239	2.0	9300 ± 30	6.3	0.50	3300	2.25	0.2	22	
L-3605	3.0	9300 ± 30	6.3	0.50	3600	3.15	0.1	22	
L-3268	4.0	9300 ± 30	6.3	0.90	3900	4.00	0.1	22	
L-3089	0.04	8800 ± 25	6.3	0.90	850	0.20	25.0	20	This long life, low power magnetron is designed for pulse doppler and beacon applications where extremely high duty is required. The L-3089 magnetron is available with warranted operation for 1000 or 2000 hours.
L-3212	0.12	9000 to 9020	6.3	0.50	800	0.55	2.7	16	This series of tunable magnetrons designed for beacon and transponder applications gives stable frequency operation with coded pulse groups with duties as high as 25%. High average duty ratings and capability for very short pulse operation (.020 μs and less) make possible many applications. Other frequency versions are available upon request.
L-3213	0.12	9050 to 9070	6.3	0.50	800	0.55	2.7	16	
L-3214	0.12	9100 to 9120	6.3	0.50	800	0.55	2.7	16	
L-3218	0.12	9150 to 9170	6.3	0.50	800	0.55	2.7	16	
L-3226	0.12	9180 to 9200	6.3	0.50	800	0.55	2.7	16	
L-3180	0.12	9200 to 9220	6.3	0.50	800	0.55	2.7	16	
L-3181	0.12	9250 to 9270	6.3	0.50	800	0.55	2.7	16	
L-3028D	0.12	9280 to 9330	6.3	0.50	800	0.55	2.7	16	
L-3601	0.12	9315 to 9340	6.3	0.50	800	0.55	2.7	16	
L-3327	0.12	9365 to 9385	6.3	0.50	800	0.55	2.7	16	
L-3187	0.12	9250 to 9270	5.0	0.60	800	0.55	2.7	16	
L-3087A	0.12	9280 to 9320	5.0	0.60	800	0.55	2.7	16	
L-3384	1.0	9280 to 9320	6.3	0.50	2800	1.33	0.3	16	
L-3058	1.0	9300 to 9320	6.3	0.50	2800	1.33	0.3	16	
L-3225	1.0	9310 to 9350	6.3	0.50	2800	1.33	0.3	16	
L-3606	0.5	9300 ± 30	6.3	0.90	1300	1.30	1.0	10	These newest, lightest and most rugged of the Litton miniature tubes are the first of a new series of all ceramic-metal construction. Having been assembled in a carefully controlled environment and processed at high temperatures, these tubes give highly reliable performance at high efficiency, negligible missing pulses, and nearly constant power with life. Tunable versions are planned.
L-3430	1.0	9300 ± 30	6.3	0.90	1400	2.20	0.5	10	
L-3358	1.0	16,000 to 16,500	6.3	0.95	3000	2.00	0.3	21	This group of highly ruggedized miniature Ku-band tubes is designed for use in high performance aircraft or missile applications. They may be pulsed with high duty coded pulse groups or with single short pulses. Special design features provide a low thermal factor less than 150 Kc/°C and stable frequency operation. Fixed frequency versions are available throughout the frequency ranges of the tunable tubes.
L-3383	1.0	16,250 to 16,300	6.3	0.95	3000	2.00	0.3	21	
L-3496	1.0	16,000 to 16,500	6.3	0.70	3000	1.60	0.3	19	
L-3359	2.0	16,000 to 16,500	6.3	0.95	3600	2.75	0.3	21	
L-3498	2.0	16,280 to 16,320	6.3	0.95	3600	2.75	0.3	21	
L-3452	2.2	16,200 ± 75	6.3	0.95	3600	2.75	0.3	20	
L-3379	1.0	8800 to 9500	6.3	0.90	3350	1.15	0.3	22	These tunable, highly ruggedized magnetrons make possible greater flexibility for beacons, transponders and small radars. Quick warmup, extremely short pulse operation, and stable frequency operation are characteristic of these long life, reliable tubes.
L-3380	2.0	8800 to 9500	6.3	0.90	3450	2.25	0.2	22	
L-3381	3.0	8800 to 9500	6.3	0.90	3600	3.25	0.1	22	
L-3382	4.0	8800 to 9500	6.3	0.90	4000	4.00	0.1	22	
L-3023/LT6233	7.0	9280 to 9345	6.3	1.0	5800	3.8	0.3	4 1/8 lbs.	These proven extremely reliable tubes are designed for beacon applications requiring constant frequency operation. Other frequency versions are available upon request.
L-3029A	7.0	9235 to 9300	6.3	1.0	5800	3.8	0.3	4 1/8 lbs.	
L-3029B	7.0	9250 to 9315	6.3	1.0	5800	3.8	0.3	4 1/8 lbs.	
L-3029C	7.0	9295 to 9360	6.3	1.0	5800	3.8	0.3	4 1/8 lbs.	
L-3029D	7.0	9265 to 9330	6.3	1.0	5800	3.8	0.3	4 1/8 lbs.	
L-3635	10.0	9375 ± 30	6.3	1.3	6000	6.0	0.2	3 3/4 lbs.	By conservative design and rigorous processing, these magnetrons provide many thousands of hours of stable performance. These tubes are available with warranted operation for 1000 or 2000 hours.
L-3431	18.0	9375 ± 30	6.3	1.3	7000	7.0	0.1	3 3/4 lbs.	
L-3654	24.0	9375 ± 30	6.3	1.3	8000	8.25	0.1	3 3/4 lbs.	
L-3469	20.0	9375 ± 30	12.6	0.5	7250	7.25	0.1	4 1/4 lbs.	Rigorous high temperature processing standard with all Litton products makes possible reliable, long life Ku-band fixed frequency tubes such as the L-3306 and L-3326.
L-3306	30.0	16,500 ± 150	12.6	2.4	12,000	12.0	0.1	5 1/2 lbs.	
L-3326	60.0	16,500 ± 150	12.6	2.4	17,000	16.0	0.1	5 1/2 lbs.

PULSE MAGNETRONS

Tube Type	Minimum Peak Power kw	Frequency Mcs	Nominal Operating Characteristics					Max. Duty %	Max. Wt. lbs.
			Ef Volts	If Amps	If eb kilovolts	ib amps			
L-3103	30.0	8500 to 9600	12.6	2.3	12.5	10.0	0.2	6 $\frac{1}{8}$	Extensive life testing of the LT-6543 X-band magnetron has demonstrated that it is one of the most reliable tunable magnetrons available today, capable of well over 1000 hours of stable performance under rugged cycle operation. The L-3103 is recommended for systems requiring higher duty operation, and the 6543A for MTI systems requiring low jitter performance.
LT-6543	65.0	8500 to 9600	12.6	2.3	15.0	15.0	0.1	6 $\frac{1}{8}$	
6543A	65.0	8500 to 9600	12.6	2.3	15.0	15.0	0.1	6 $\frac{1}{8}$	
L-3168	30.0	9375 \pm 30	12.6	2.3	12.5	10.0	0.2	6	Fixed frequency versions of the proven, long life, LT-4J52A magnetron other than those listed here are available upon request. The L-3168 is recommended for systems requiring higher duty operation and the LT-6510 for MTI systems requiring low jitter performance.
LT-4J52A	70.0	9375 \pm 30	12.6	2.3	15.0	15.0	0.1	6	
LT-6510	65.0	9375 \pm 30	12.6	2.3	15.0	15.0	0.1	6	
L-3036A	65.0	9410 \pm 5	12.6	2.3	15.0	15.0	0.1	6	
L-3036B	65.0	9275 \pm 15	12.6	2.3	15.0	15.0	0.1	6	Long life and reliable performance are characteristic of these tunable Ku-band magnetrons which are rated for 1.0, 2.0 and 3.0 microsecond pulse operation respectively. The special tuner, which tunes the frequency range in approximately five turns, is designed for use with a multi-position Collins tuner drive.
L-3036F	65.0	9245 \pm 30	12.6	2.3	15.0	15.0	0.1	6	
L-3083A	60.0	16,000 to 17,000	12.6	2.4	17.0	16.0	0.1	6 $\frac{1}{8}$	
L-3083B	60.0	16,000 to 17,000	12.6	2.4	17.0	16.0	0.1	6 $\frac{1}{8}$	This series of tunable Ku-band magnetrons rated for 1.0, 2.0 and 3.0 microsecond pulse operation respectively is similar to the L-3083 series except that approximately 120 turns are required to traverse the frequency range. Tuning may be manual or by mechanical servo-drive.
L-3083C	60.0	16,000 to 17,000	12.6	2.4	17.0	16.0	0.1	6 $\frac{1}{8}$	
L-3101A	60.0	16,000 to 17,000	12.6	2.4	17.0	16.0	0.1	5 $\frac{3}{4}$	
L-3101B	60.0	16,000 to 17,000	12.6	2.4	17.0	16.0	0.1	5 $\frac{3}{4}$	
L-3101C	60.0	16,000 to 17,000	12.6	2.4	17.0	16.0	0.1	5 $\frac{3}{4}$	
L-3305	65.0	8500 to 9600	12.6	2.3	15.0	15.0	0.1	9 $\frac{1}{2}$	Frequency diversity systems with increased performance and anti-jamming capability are possible with this hydraulically tunable magnetron capable of operating with programmed or random tuning rates up to 100,000 Mcs/s. The L-3305 is interchangeable with the 6543 and 4J52 magnetrons.
LT-6344A	175	5450 to 5825	13.5	2.5	21.5	22.0	0.1	25	Proven long life at C-band is available in the LT-6344A and LT-7156 magnetrons, where life in excess of 2500 hours has been recorded. Both the LT-6344A and the higher-powered version, the LT-7156, have been included in this catalog for the first time.
LT-7156	250	5450 to 5825	5.0	5.0	25.0	24.0	0.1	35	
L-3357	190	9200 to 9550	13.75	3.35	21.5	27.5	0.1	12	The L-3312 is the first all ceramic-metal tunable version of the 4J50 magnetron. Reliable, linear tuning, low missing pulse performance, and long life at constant power are characteristic of this tube, which is interchangeable with the 7008 magnetron. The L-3357 is a limited tuning range version of the type L-3312.
L-3312	200	8500 to 9600	13.75	3.35	21.5	27.5	0.1	11	
LT-4J50A	225	9375 \pm 30	13.75	3.35	21.5	27.5	0.1	10	
L-3039D	225	8800 \pm 20	13.75	3.35	21.5	27.5	0.1	10	
L-3039E	225	8860 \pm 20	13.75	3.35	21.5	27.5	0.1	10	Fixed frequency versions of the widely used, reliable 4J50 magnetron are used in systems requiring multi-frequency operation. The L-3613 magnetron is a high pulling version of the 4J50 designed for frequency modulation and frequency diversity applications. A minimum of 30 Mc of frequency shift is obtained by varying the phase of a 2.0:1 VSWR.
L-3039F	225	8920 \pm 20	13.75	3.35	21.5	27.5	0.1	10	
L-3039G	225	8980 \pm 20	13.75	3.35	21.5	27.5	0.1	10	
L-3039H	225	9040 \pm 20	13.75	3.35	21.5	27.5	0.1	10	
L-3039I	225	9100 \pm 20	13.75	3.35	21.5	27.5	0.1	10	
L-3039J	225	9160 \pm 20	13.75	3.35	21.5	27.5	0.1	10	
L-3039K	225	9220 \pm 20	13.75	3.35	21.5	27.5	0.1	10	
L-3039L	225	9280 \pm 20	13.75	3.35	21.5	27.5	0.1	10	
L-3039M	225	9340 \pm 20	13.75	3.35	21.5	27.5	0.1	10	
L-3039N	225	9400 \pm 20	13.75	3.35	21.5	27.5	0.1	10	
L-3039P	225	9375 \pm 30	13.75	3.35	21.5	27.5	0.1	10	
L-3039R	225	8790 \pm 90	13.75	3.35	21.5	27.5	0.1	10	
L-3613	225	9375 \pm 30	13.75	3.35	21.5	27.5	0.1	10	
L-3030	300	9375 \pm 30	13.75	3.35	27.5	27.5	0.1	14	These high power versions of the standard 4J50 magnetron are designed for component testing and are not recommended for system applications.
L-3030B	300	9000 \pm 30	13.75	3.35	27.5	27.5	0.1	14	
L-3030C	300	9200 \pm 30	13.75	3.35	27.5	27.5	0.1	14	
L-3455	2.0 MW	406 to 450	6.5	55	55	97.2	.002	220	This two-megawatt, all metal and ceramic, tunable, UHF pulse magnetron is one of the most recent additions to Litton capability in pulse magnetrons. Intended for high powered airborne search radar, the L-3455 provides long life, high reliability, negligible missing pulses, and high efficiency. This tube is capable of withstanding high shock and vibration. Liquid cooling is required on tuner and anode assemblies.

CW/PULSE MAGNETRONS

Tube Type	Tunable Frequency Mcs	Minimum CW Power Watts	Nominal CW Characteristics		Minimum Pulse Power kw	Nominal Pulse Characteristics		All tubes in this series are packaged in 7½" diameter bowl magnets and are equipped with tuning knobs. Each tube weighs approximately 18 lbs. and is 11½" high. Liquid cooling is required on the body and tuner and forced air on the stem and output window. The tubes are intended for either CW, MCW or high duty pulse operation. CW power rating must not be exceeded when operating under high duty pulse conditions. All tubes in this series have 93 watt filaments. Standby filament voltage is nominally 5.5 volts. All tubes have a similar external appearance with the exception of the RF output fitting.

These voltage tunable CW oscillators are designed for long reliable performance into a mismatch of 1.5:1 without discontinuities. A large variety of uses include high power sweep oscillators, frequency modulated or amplitude modulated transmitters or as barrage countermeasures power sources. All are designed to operate at similar voltages and currents and have similar mounting dimensions. Tubes operating above 4.8 kMc are equipped with double ridge broadband waveguides and those below 4.8 kMc use 7/8" coaxial outputs. All have 6.3 volt filaments. Other types are in development.

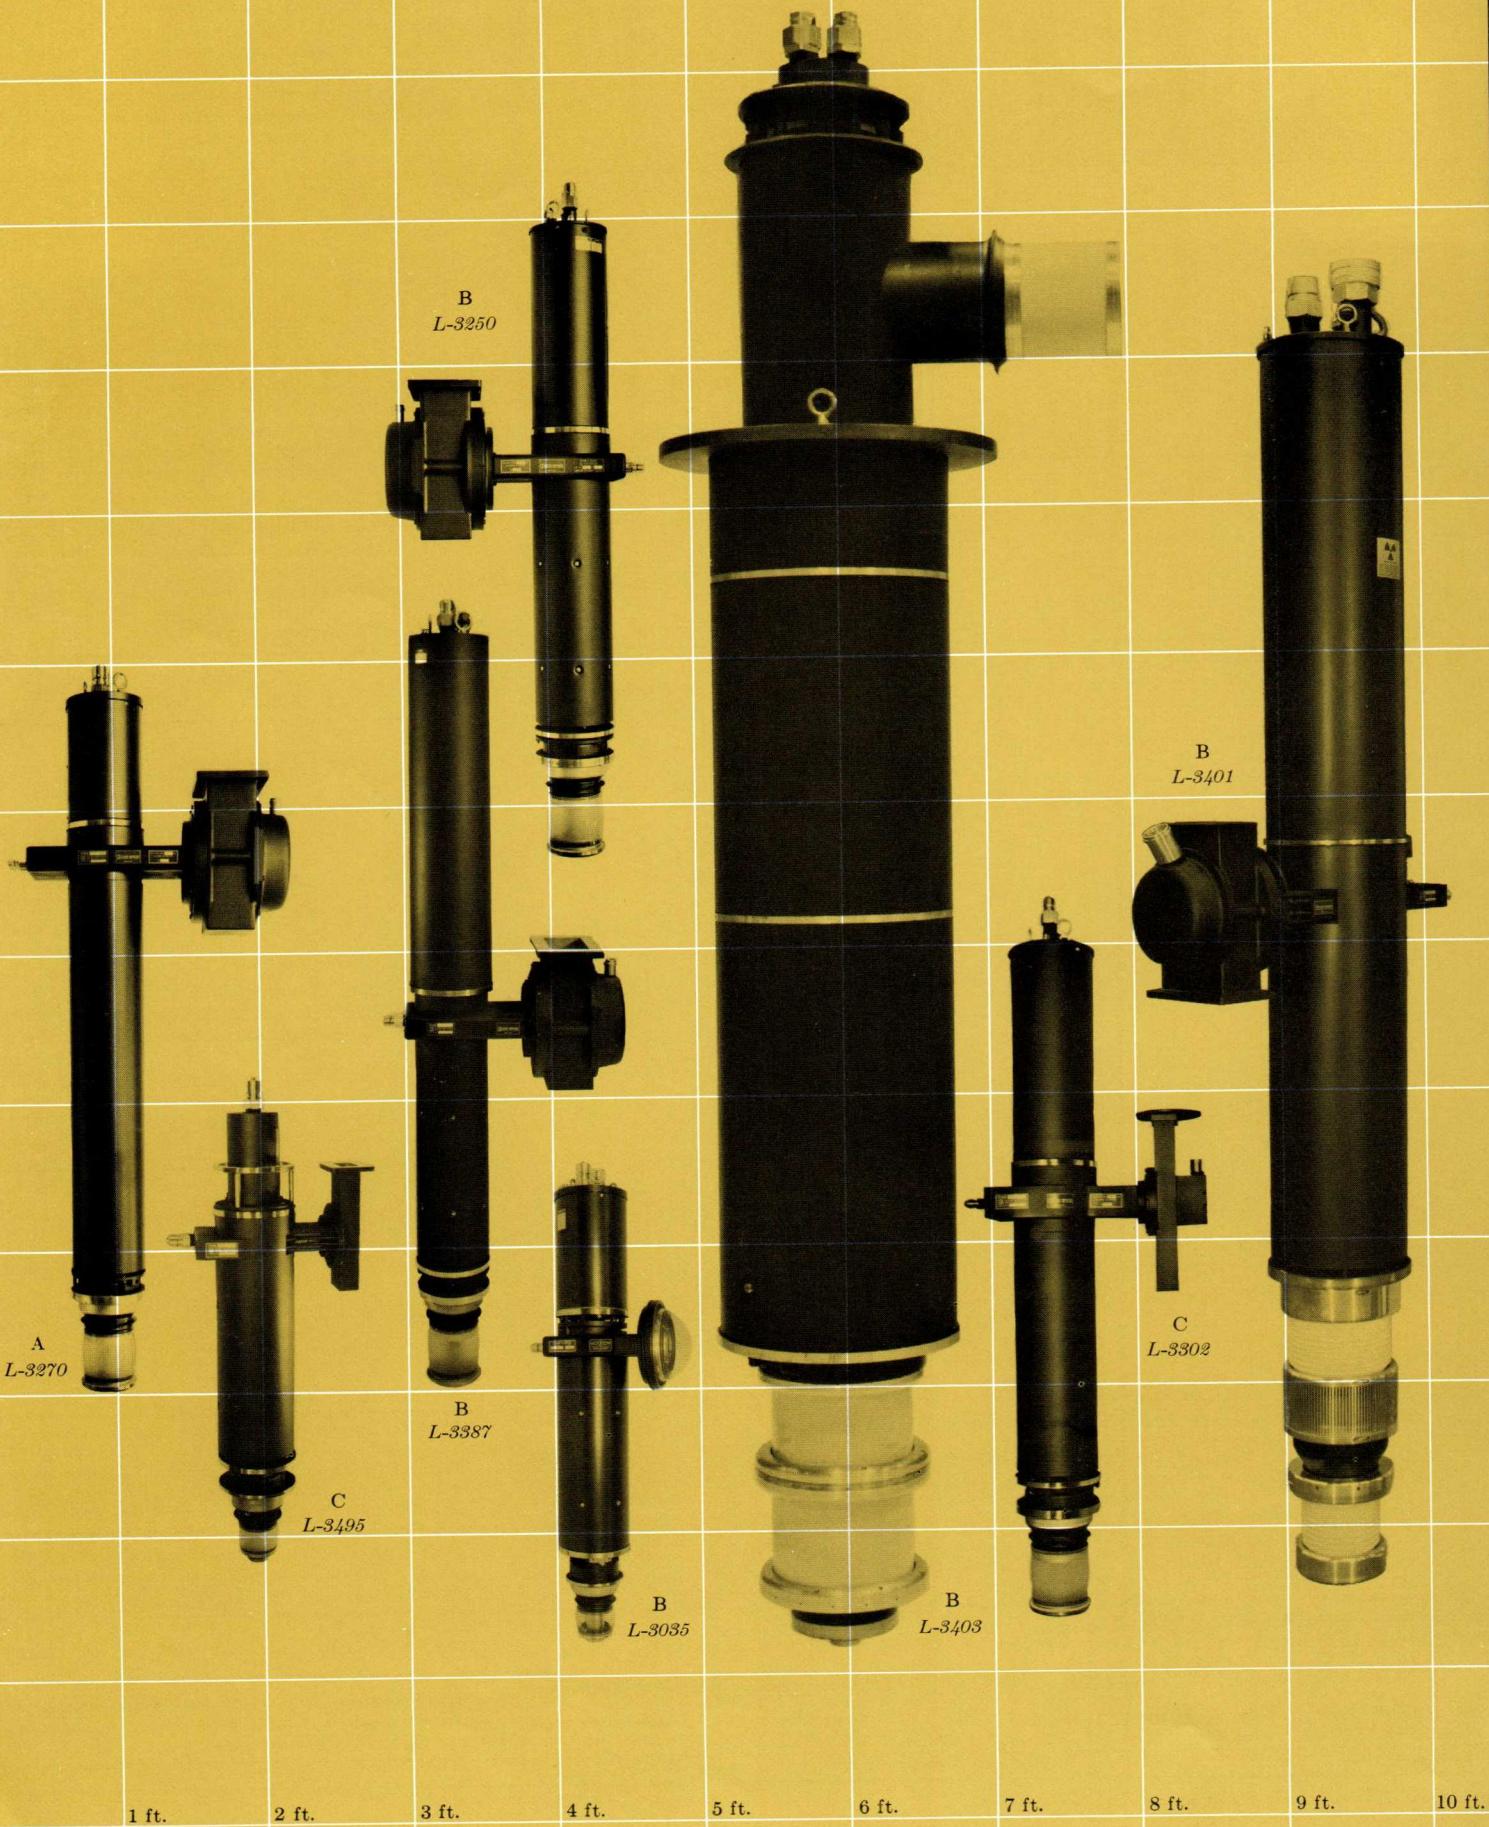

CROSSED FIELD FORWARD WAVE AMPLIFIER TUBES

Tube Type	Tunable Frequency Mcs	Minimum Power Kilowatts	Gain db	Maximum Duty	Liton Industries is engaged in R & D on crossed field forward wave amplifiers at microwave frequencies S through Ku-band. Work is for both CW and pulse applications. These are very efficient, high power, high gain linear amplifiers with many possible new applications. Details are classified for most tube types.

TRAVELING WAVE TUBES

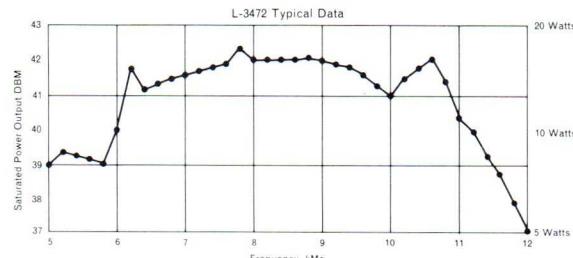

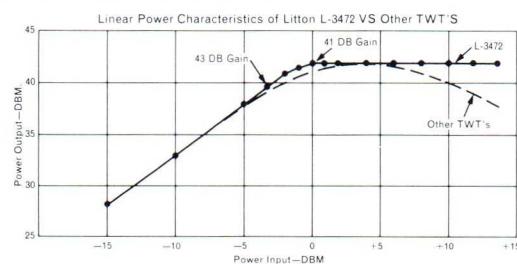

Litton Industries traveling wave tubes have been engineered for high CW power, wide bandwidth, yet are lightweight and compact. Most of the TWTs listed below are PPM focused. Special helix design and fabrication techniques have raised the saturation gain to within 3 db of small signal gain. These tubes can be supplied with small signal gains up to 60 db and with linear power

characteristics similar to the L-3472 shown on these pages. Input and output circuits are coaxial, providing minimum frequency sensitivity. Therefore, useable bandwidth is limited only by the electronic bandwidth of the beam and circuit combination. These all metal-ceramic, ruggedized TWTs, weighing between 1.5 and 6.0 pounds, meet military environmental specifications, Class II.

Tube Type Number	Frequency Range Megacycles	Power Output Minimum	Small Signal Gain Minimum	Duty Factor	Cooling

An advanced concept for high power beam switching, the new Litton INJECTRON® high voltage, high current switch tubes feature 95 per cent efficiency and fast rise time at low control voltage levels. The collector current is independent of collector voltage over a broad range, resulting in pentode-like current characteristics. Also features high voltage gain under conditions of low impedance loads.

DISPLAY DEVICES

CATHODE RAY TUBES

These tubes represent only a cross-section of the types and varieties of precision, high performance cathode ray tubes available from the Display Devices Department. Variations of these tubes and other special purpose tubes are available upon request.

A9A2	8½" PRINTAPIX® CRT for high speed facsimile reproduction of documentary and half tone copy. One of PRINTAPIX family. Others available include 2¾", 5" and 11".
B3C2	2¾" PRINTAPIX® CRT with supplementary electrostatic deflection plates for the high speed direct printing of high quality alpha-numeric symbols.
C2A11	Special Purpose MICROPIX® CRT 1¼" screen diameter, minimum 2000 lines resolution. For minimum volume high resolution recording equipment.
C5A11	5" Multi-Purpose MICROPIX® CRT. For use in all high performance applications requiring high resolution. Line widths of 0.0006 inches available. Other phosphors available for special purposes.
C10T7	10" Low drive (12 volt video) version of the 10KP7A for transistor operation. Directly mechanically and electrically interchangeable with the 10KP7A.
G5A11	5" Special Purpose MICROPIX® CRT. Especially adapted for precision camera recording of high resolution information.
E1E11	1" Fiber Optic CRT—has precision array of 32 x 32 light conducting fibers for the direct film recording of digital information. Electrically interchangeable with the 1DP11.
E2A16	1½" Fiber Optic high resolution CRT for direct film recording. One of a family of Fiber Optic Tubes.
L-4003	5000 Line 21" rectangular glass tube. Full gamut of phosphors. Metallized screens.
L-4010	5" Dual deflection COMPOSIPIX® high definition character writing CRT. 4000 line resolution. Electrostatic deflection for character writing; magnetic deflection for character positioning.

CRT OPERATIONAL ACCESSORIES

These items result from years of experience by the Equipment Group of the Display Devices Department with operation and testing of high performance CRT's. They are provided as accessories to enable the user to achieve maximum performance from CRT's. Special designs for unusual applications can be provided upon request.

A100	High Voltage Coupling Amplifier—provides CRT metering, all electron gun static voltages and signal amplification and isolation with bandpass of 10 cps to 4.5 Mc for CRT's operating with depressed cathode and grounded anode.
A101	Same as A100, except bandpass is from DC to 300 Kc.
A105	Low frequency deflection amplifier. For sawtooth waveforms from dc to 100 cycles, sine waves to 1000 cycles or more.
A106	Video Amplifier and electron gun supply. Has all the features of the PS 105, plus a high level video amplifier, 10 cps to 5 Mc band width.
A107	Same as A100, except bandpass from 10 cycles to 12 Mc.
A111	Same as A106, with extended range to 12 Mc.
PS101	Universal Current Regulated Focus Supply—with appropriate focus coil will focus all magnetically focused CRT's. Has provision for introduction of low frequency dynamic focus correction.
PS102	Universal High Voltage Power Supply for CRT operation. RF type supply with 0 to 30 KV at 1 ma output, ½% regulation and low ripple. For use with CRT's requiring grounded anode operation.
PS103	Same as PS102 except the output voltage is positive for conventional operation of CRT's.
PS104	Positive regulated, high voltage power supply, 15 to 30 kv or 20 to 40 kv. Similar to PS103, except does not go to zero.
PS105	Universal Electron Gun Power Supply. Supplies static voltages to the electron gun of magnetically focused and deflected CRT's.
RG100	Universal Raster Generator for TV standards. Will provide high quality raster for all magnetically deflected CRT's up to 90° and 27.5 KV.
S100	Universal mounting socket for all 2¾" PRINTAPIX® CRT's.
SG200	Sawtooth Magnetic Sweep Generator, 2.5 to 6 Kc.
5RG	Tube Mount for all MICROPIX® tubes, includes adjustable mounts for deflection and focus components, permitting precision positioning.

EQUIPMENT—ACCESSORIES

To assist Litton Industries' customers in the application of tubes to their equipments, a new department has been formed within the Electron Tube Division. The primary function of this group is to design, in parallel with the tube design phases, accessory items such as focus coils, water loads, radiation

shields and operating power equipment, where applicable. Illustrations of some of these accessory items are shown on the facing page, and the listings below indicate examples of equipment available. In addition, custom requirements will be supplied upon request.

POWER SUPPLIES

Power supplies are offered to tube customers on a custom design basis. The close correlation between tube design and operating power requirements gives Litton a unique capability to match the requirements of the tube at the earliest possible time. The parallel development of the tube and the equipment permits

customers to achieve operational testing without inherent delays. Technical capability includes DC power supplies for microwave tubes, pulsed power supplies and focusing solenoid current supplies. Power supplies for the Elliott-Litton millimeter wave tubes are also available.

AMPLIFIERS AND SIGNAL SOURCES

Model Number	Description	Frequency Range	Power Output
3653	CW Magnetron RF Signal Source	350 to 10,500 Mc	300 to 600 Watts
202	TWT Amplifier	2 kMc to 11 kMc	2 Watt
211	TWT Amplifier	4 kMc to 11 kMc	10 Watt

OTHER ACCESSORY EQUIPMENTS

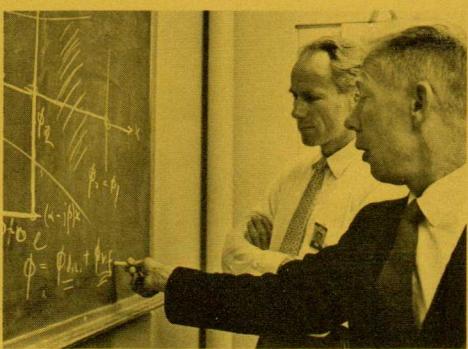

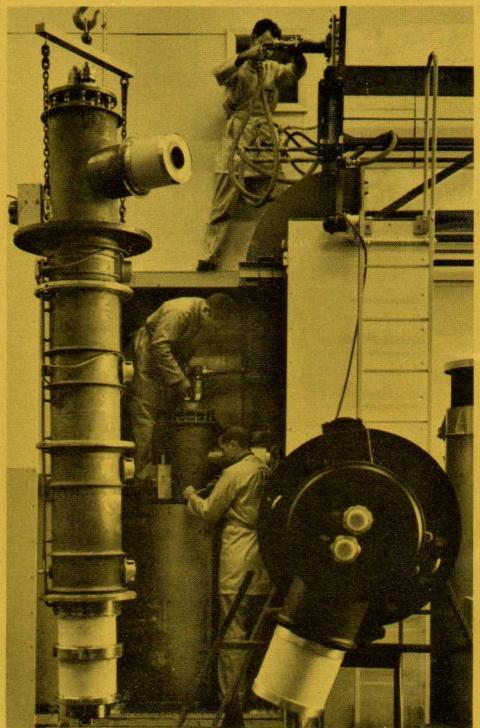

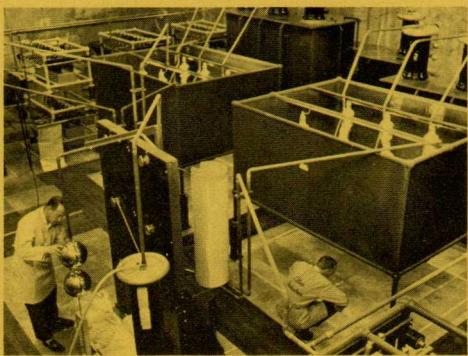

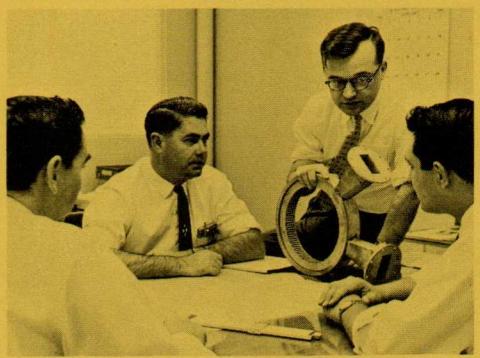

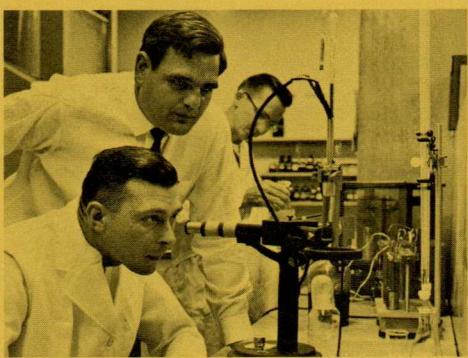

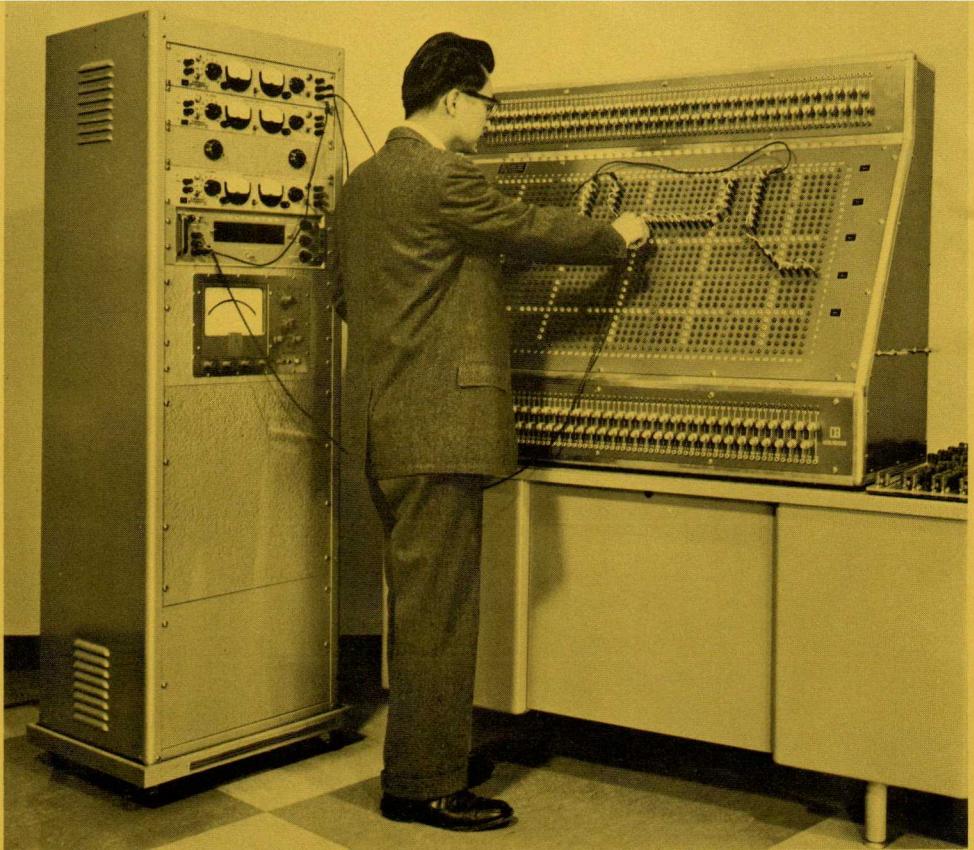

Litton Industries also manufactures Magnetron Sockets, Magnetron Filament Controllers, Radiation Shields, and Thermopiles. Information on our standard

models is available upon request. Litton welcomes inquiries concerning particular needs.

RESISTANCE NETWORK ANALOGUE

The Litton Industries Precision Resistance Network Analogue has been designed to meet requirements for a versatile tool to solve boundary value problems under static conditions. The use of the Resistance Network Analogue enables the engineer to quickly obtain solutions to problems involving Poisson's,

Laplace's and special cases of Maxwell's equations with a higher degree of accuracy than any other means presently available. The accuracy of the Network Analogue is inherently high (1 part in 10,000).

RESEARCH LABORATORY

New Ideas—New Areas of Interest—New Concepts The Litton Industries Electron Tube Division Research Laboratory was established three years ago in modern San Carlos facilities to explore and solve problems relative to electron devices.

Key scientists, backed by a highly qualified staff, now include such widely-known engineers as Research Director Dr. Joseph F. Hull and Senior Scientists Dr. J. Richard Hechtel, Dr. Philip Hess, Dr. Gerold E. Pokorny, and Dr. Alfred J. Prommer.

Aggressive research and development have led to many new product areas such as:

- *high power switch tubes*
- *new miniature magnetrons*
- *super-power klystrons*
- *the CW magnetron for commercial applications*
- *solid state and gaseous lasers*
- *electrostatically-focused klystrons*
- *Resistance Network Analogue*
- *crossed-field forward-wave amplifier*

The tube divisions' areas of interest continuously grow as evidenced by current Research Laboratory projects such as:

- *electron optics studies*
- *slow-wave structure studies*
- *millimeter wave generation*
- *plasma physics*
- *quantum electronics*
- *low noise research*
- *the injected-beam crossed-field amplifier (BIMATRON)*
- *solid state devices research*
- *the study of new uses for microwaves*
- *light amplifiers*
- *ion-propulsion*
- *plasma devices*
- *super-power microwave sources*
- *the distributed-emission crossed-field amplifier (DEMATRON)*

Litton Industries, Electron Tube Division, San Carlos, California

MARKETING

APPLICATION ENGINEERING SERVICES AND REGIONAL OFFICES:—Main marketing offices are located in San Carlos, California, where application engineering specialists are available for consultation. Call LYtell 1-8411. Our regional offices are located at:

1. 341 North Foothill Road
Beverly Hills, California
TRemont 8-1570
James C. Munger, Manager
2. 333 West First Street
Dayton, Ohio
BAldwin 3-3285
Michael F. Olah, Jr., Manager
3. P.O. Box 548
Manasquan, New Jersey
CAstle 3-4160
Frank M. Oakes, Manager
4. 221 Crescent Street
Waltham, Massachusetts
TWinbrook 9-2238
Robert H. Kelly, Manager
5. 1625 "I" Street, N.W.
Washington 6, D.C.
EXecutive 3-4991
W. Dewey Clower, Millimeter
Wave Tube representative

Foreign sales are handled through:

1. Elliott-Litton, Ltd.
Manor Way
Borehamwood, Hertfordshire
London, England
(serving British Commonwealth,
excluding Canada)
2. Lake Engineering Co., Limited
123 Manville Road
Scarborough, Ontario, Canada
(serving Canada)
3. Litton World Trade Corporation
P.O. Box 2754
Zurich 23, Switzerland
(serving Free Europe,
Africa and Middle East)
4. Kobe Kogyo Corp.
No. 5, Wadayama Dori 1-Chome
Hyogo-Ku, Kobe, Japan
(serving Free Asia)

Affiliated Companies:

1. Elliott-Litton, Ltd.
Manor Way
Borehamwood, Hertfordshire
London, England
2. Kobe Kogyo Corp.
No. 5, Wadayama Dori 1-Chome
Hyogo-Ku, Kobe, Japan
