

SPECIFICATION CV4031 ISSUE 1 DATED 26.10.56

AMENDMENT 1

PAGE 3

<u>GROUP E</u>	<u>RESONANCE SEARCH</u>
<u>DELETE</u>	ALL "LIMITS" IN MAX. COLUMN (20, 100 AND 350)
<u>INSERT</u>	"TO BE RECORDED AND AGREED LATER".

T.V.C. Office
for Royal Aircraft Establishment.

30th November, 1956

Z.13233.R.

ELECTRONIC VALVE SPECIFICATION

SPECIFICATION CV.4031

ISSUE 1 - DATED 26TH OCTOBER, 1956.

AMENDMENT NO.2.

GROUP F.

Intermittent Life Test Point (1000 hrs.)

Electrode Insulation

Delete all reference to Heater Current Test.

Add at the end of this Group the following:-

K1001 Ref.	Test	Test Conditions	AQL	INSP.	SYMBOL	LIMITS						
						% LEVEL	MIN	LAL	BOGEY	UAL	MAX	AID
	ELECTRODE	Vh = 6.3 Note 1				R	30	-	-	-	-	MΩ
	INSULATION	Vg to all = -100V Va to all = -300V	6.5	-	R	30	-	-	-	-	-	MΩ

December, 1957

T.V.C.

SPECIFICATION MOS(A)/CV4031
ISSUE 1 DATED 26.10.56

AMENDMENT NO. 3.

Page 1 Note A Amend to read:-
At Va = 100V; Vg = 0; Rk = 50 ohms (Ia = 9.0 mA approx)

Page 5 Note 6 Amend to read:-

Test each section separately with the grid and anode of
the opposite section earthed.

April, 1959

R.R.E.

N.54773/D

ELECTRONIC VALVE SPECIFICATIONS
SPECIFICATION MOS(A)/CV 4070 ISSUE NO.1. DATED 8.1.57
AMENDMENT NO.4

- (i) Page 1. (Top of Page) Amend "Ministry of Supply M.O.S.(A) R.A.E." to read "Ministry of Aviation - DLRD/RRE".
- (ii) Page 1. Specification Title Amend "Specification MOS(A)CV.4070" to read "Specification MOA/CV4070".
- (iii) Page 3 Group D. Capacitance

Against 'Ck, gh' in the column headed "Limits, Min.", delete "7.0" and substitute "6.5".

November, 1964

T.V.C. for R.R.E.

(222410)

Specification MOS(A)/CV4031 Issue 1 Dated 26.10.56. To be read in conjunction with B.S.448, B.S.1409 and K.1001	<u>SECURITY</u> <u>Specification</u> UNCLASSIFIED	<u>Valve</u> UNCLASSIFIED
---	---	------------------------------

TYPE OF VALVE	- Reliable Double Triode	MARKING
CATHODE	- Indirectly heated	K1001/4
ENVELOPE	- Glass	Additional Marking:- 6101/6J6MA
PROTOTYPE	- CV.850	
R.E.T.M.A. DESIGNATION	- 6101/6J6MA	BASE B.S.448/B7G
<u>RATING</u> (All limiting values are absolute)		<u>CONNECTIONS</u>
Heater Voltage	(V) 6.3	Note D
Heater Current	(A) 0.45	
Max. Operating Anode Voltage	(V) 330	
Max. Anode Voltage (Ia = 0)	(V) 550	
Max. Anode Dissipation (per section)	(W) 1.6	
Max Heater - Cathode Voltage	(V) ± 100	
Max Cathode Current	(mA) 25	B
Max. Bulb Temperature	(°C) 165	D
Max. Shock (short duration)	(g) 500	
Max. Acceleration (continuous operation)	(g) 2.5	
Max. Operating Frequency	(Hz) 250	
Mutual Conductance	(mA/V) 5.6	A
Anode Impedance	(kΩ) 6.3	A
Amplification Factor	38	A
<u>CAPACITANCES</u> (pF)		
C in (nom.) per section	2.45	C
C' out (nom.)	0.45	C
C" out (nom.)	0.40	C
ca,g (nom.) per section	1.5	C
Ch,k (nom.)	5.4	C
<u>NOTES</u>		
A. At Va = 100V; Vg = -4.5V (Ia = 9.0mA approx.)		
B. Difficulty may be encountered if this valve is operated for long periods of time with very small values of cathode current.		
C. Without screen.		
D. <u>Caution to Electronic Equipment Design Engineers:</u> Special attention should be given to the temperature of valves to be operated in aircraft. Reliability will be seriously impaired if the maximum bulb temperature is exceeded. The life expectancy may be reduced if conditions other than those specified for life tests are imposed on the valve and will be reduced appreciably if absolute maximum ratings are exceeded. Both reliability and performance will be jeopardised if heater voltage ratings are exceeded: life and reliability performance are directly related to the degree that regulation of the heater voltage is maintained at its centre-rated value.		

CV4031

TESTSTo be performed in addition to those applicable in K1001

Test to be performed in the specified order unless otherwise agreed with the Inspecting Authority

NOTES

1. Heater and Cathode strapped and considered as a single electrode.
2. Heater positive and negative successively.
3. The Change of Mutual Conductance is expressed:-

$$\frac{(gm \text{ at } 6.3V) - (gm \text{ at } 5.7V)}{(gm \text{ at } 6.3V)} \times 100\%$$

4. Valves shall be vibrated in each of the three required planes for not less than 30 hours, and not less than 100 hours total. Heater switched 1 minute on 3 minutes off. No other voltages applied.
5. Life Test Conditions. $V_{hk} = 180V$ heater positive. V_a not less than 125 volts. $R_k = 50 \Omega$
6. Test each section separately with the elements of the opposite section earthed except where otherwise stated.
7. Pre-heat the valves for 5 minutes with both sections operating under the test conditions.
8. I_g shall not be rising or out of limit after a total of 10 minutes.
9. The valve shall be mounted so that the direction of Vibration is parallel to the minor axis of the mounting structure. Vibration frequency = any fixed frequency in the range 25 - 100 c/s. Max, peak acceleration = $2g$. The test shall be of sufficient duration to obtain a steady reading of noise output.
10. Test with the sections connected in parallel.
11. Parasitic suppressors of 50 ohms are permissible. Connect cathodes to earth through 1500 ohms. $C_k = 1000\mu F$. Grids connected to earth.
