TEMPERATURE LIMITS (Absolute limits)

Water inlet temperature

 $t_i = max.$ 50 °C

Temperature of the seals

= max. 220 °C

WATER COOLING CHARACTERISTICS

W _a	t _i	q _{min}	p _i	t _o
(kW)	(°C)	(l/min)	(atm)	(°C)
2	20	1	0.032	56
	50	2	0.084	68
4	20	2.2	0.10	49
	50	4.4	0.49	65
6	20	4	0.41	43
	50	8	1.4	62

At water inlet temperatures between 20 and 50 $^{\rm o}{\rm C}$ the required quantity of water can be found by linear interpolation.

At frequencies above 4 MHz a low velocity air flow should be directed to the seals.

At frequencies above 4 MHz both grid terminals should be connected in parallel and care should be taken to distribute the R.F. current equally over both grid terminals to avoid excessive temperatures.
